Sound : In the 1920s, the development of electronic sound recording technologies made it practical to incorporate a soundtrack of speech, music and sound effects synchronized with the action on the screen.citation needed The resulting sound films were initially distinguished from the usual silent moving pictures or movies by calling them talking pictures or talkies.citation needed The revolution they wrought was swift. By 1930, silent film was practically extinct in the US and already being referred to as the old medium.citation needed

Trailer and teaser Main article: Film trailer Trailers or previews are advertisements for films that will be shown in 1 to 3 months at a cinema. Back in the early days of cinema, with theaters that had only one or two screens, only certain trailers were shown for the films that were going to be shown there. Later, when theaters added more screens or new theaters were built with a lot of screens, all different trailers were shown even if they weren't going to play that film in that theater. Film studios realized that the more trailers that were shown even if it wasn't going to be shown in that particular theater the more patrons would go to a different theater to see the film when it came out. The term trailer comes from their having originally been shown at the end of a film program. That practice did not last long because patrons tended to leave the theater after the films ended, but the name has stuck. Trailers are now shown before the film or the A film in a double feature program begins. Film trailers are also common on DVDs and Blu-ray Discs, as well as on the Internet and mobile devices. Trailers are created to be engaging and interesting for viewers. As a result, in the Internet era, viewers often seek out trailers to watch them. Of the ten billion videos watched online annually in 2008, film trailers ranked third, after news and user-created videos.¹² Teasers are a much shorter preview or advertisement that lasts only 10 to 30 seconds. Teasers are used to get patrons excited about a film coming out in the next six to twelve months. Teasers may be produced even before the film production is completed.

Some films in recent decades have been recorded using analog video technology similar to that used in television

production. Modern digital video cameras and digital projectors are gaining ground as well. These approaches are preferred by some film-makers, especially because footage shot with digital cinema can be evaluated and edited with non-linear editing systems NLE without waiting for the film stock to be processed. The migration was gradual, and as of 2005, most major motion pictures were still shot on film.needs update
